Cloud Services Business Overview Data Sheet

daisy.

CloudSure UK hosted Microsoft Windows Server 2012.

CloudSure UK from Daisy provides a flexible and scalable hosting solution with a secure, virtualised environment that delivers IT resources – including servers, storage, memory, software licensing and bandwidth – 'as-a-Service'.

Microsoft Windows Server 2012

As part of our CloudSure UK service we provide enterprise class packages and in particular Microsoft Windows Server 2012.

Below are some high level benefits for hosted Microsoft Windows Server 2012:

- Best-in-class performance and scale for Microsoft workloads
- Run the most demanding applications with high levels of performance and scalability
- Optimal resource availability is provided for key applications and workloads
- Provide high levels of services for the key application and workloads
- Complete flexibility for migrating virtualised workloads without interruption or downtime
- Enable a scalable, isolated, multitenant infrastructure without VLANs
- Robust, reliable and resilient infrastructure foundation for running continuous services
- Provide flexibility for application-level resiliency

How You Benefit

- Benefit from our investment in HP Converged Cloud technology
- Reduced downtime as a result of automated protection
- Right sized drivers provisioned on the right speed disk to ensure optimal performance
- Always-on remote access to corporate information from trusted CloudSure UK servers
- Unified application and device management with common identity
- Granular, policy-based data protection and regulatory compliance
- Support for demanding, critical business workloads
- Peace of mind ensured through on-time updates performed by qualified Daisy engineers
- Network separation provided from Daisy shared services and private business data for connectivity to Daisy Management network

"Daisy ensured the right technical specialists were always available when we needed them. This continuing commitment is why Baxi Group and Daisy have been partners for so long."

Luke Vanhegan – Baxi Group

What's covered?

Delivered from Daisy owned and operated data centres built to Tier III standards, CloudSure UK consists of multiple enterprise level virtualised clusters replicated at a secondary site.

Daisy CloudSure UK utilises the following building blocks for Servers which are supplied at Operating System only and available from the following list:

Description	vCPU	vRAM	Page file	C:	Backup
Basic (1)	1	4	6	60	60
Small (2)	1	8	12	60	60
Medium (3)	2	8	12	60	60
Large (4)	2	16	24	60	60
Enterprise (5)	4	16	24	60	60

Peace of Mind

As Daisy has a wealth of experience in providing cloud hosting you can be assured of the value added benefits provided by provisioning Microsoft Windows Server onto your CloudSure UK platform, some of these include:

Operating System Monitoring & Reporting

- Daisy will provide 24/7 monitoring of the CloudSure UK Virtual Server

Virtual Server Licensing

- Each package provided by Daisy includes flexible license declaration with no hidden costs

Connectivity and Access

- Easy access to the system via the Internet and Private WAN connectivity

System Anti-Virus

- Daisy will install, configure and administer an Anti-Virus and Anti-Malware agent upon each Microsoft Windows Server 2012 and within the CloudSure UK environment
- Updates to the definition files for Anti-Virus applied as required upon release by the vendor
- Daily proactive monitoring of the Anti-Virus software to ensure severs and desktops are up to date

System OS Updates

- Daisy will ensure operating system updates and patches are performed shortly after release by the manufacturer

Why CloudSure UK – Hosted Database Services?

- Avoid CAPEX, and facility lease commitments with our CloudSure UK Platform-as-a-Service
- Choose from a variety of enterprise class CloudSure UK packages which are scalable to suit your business needs
- Benefit from our investment in HP Converged Cloud technology
- Reduce IT support and maintenance costs
- Save on power utilised to run and cool the Data Centre – and reduce your carbon footprint
- Maximize availability – keep your business up and running with 24x7 monitoring and SLAs
- Avoid over dimensioning; 'right sized' for your current needs and your business growth
- Increase agility – respond quickly to changing workloads with this scalable solution
- Gain flexibility through better application testing and quicker deployment of line of business applications
- Access to UK's major network operators, ISPs and internet exchange points
- Works to ensure Information Security: ISO/IEC 27001:2005 certification
- Help to meet compliance regulations, and UK Data Sovereignty requirements
